ROBOTIS OP3 Specs

ROBOTIS OP3	Specifications
身高	510mm
体重	3.5kg without skin
自由度	20
主控制器	Intel NUC i3, OpenCR
传感器	FHD Webcam, 9-Axis IMU
IO Devices	LEDs(x4), Buttons(x4), Speaker(x1)
电池	LiPo 11.1V, 1800mA
开发环境	Linux Mint 18.1(64-bit) C++, ROS, Dynamixel SDK

京天
JING TIAN

OP3 Hardware Specs

	ROBOTIS OP2	ROBOTIS OP3
舵机	MX-28	XM430-W350
CPU	Intel Atom N2600 @1.6GHz dual core	Intel Core i3 processor dual core
RAM	2GB DDR3 SODIMM 1066MHz (user-replaceable)	8GB DDR4 SODIMMs 2133MHz (32GB maximum) (user- replaceable)
Storage	half-size mSATA module (32GB) (user-replaceable)	M.2 SSD module (128GB) (user-replaceable)
操作系统	any Linux release (32-bit) any Windows release (32-bit)	any Linux release (32-bit/64-bit) any Windows release (32-bit/64-bit)
网络	Realtek 10/100/1000 Mbps Ethernet 802.11n (2.4GHz-only)	Intel 10/100/1000 Mbps Ethernet 802.11ac (2.4GHz, 5GHz) Bluetooth 4.1
摄像头	Logitech C905 (1600x1200)	Logitech C920 (1920x1080)

OP3 Hardware (Dynamixel)

	MX-28	XM430-W350
Operation Mode	Wheel Joint Multi-turn	Current Velocity Position Extended Position Current based Position PWM
Gear Ratio	193 : 1	353.5 : 1
Stall Torque	2.5 Nm @ 12.0V	4.1 Nm @ 12.0V
No Load Speed	55 RPM @ 12.0V	46 RPM @ 12.0V
Protocol	Protocol 1.0 / Protocol 2.0	Protocol 1.0 / Protocol 2.0
Dimension	35.6 x 50.6 x 35.5	28.5 x 46.5 x 34
Material	Full Metal Gear Engineering Plastic	Full Metal Gear Metal Body
Weight	77g	82g

OP3 ROS Packages

ROBOTIS-OP3

Motion Module

- [op3_action_module](#) : This module manages every joint actions.
- [op3_base_module](#) : This module manages initial pose and basic functions.
- [op3_head_control_module](#) : This module controls the head.
- [op3_walking_module](#) : This module controls walking.

Sensor Module

- [open_cr_module](#) : This module is required to use OpenCR as a sensor.

OP3 ROS Packages

ROBOTIS-OP3-msgs

Module msgs

- [op3_action_module_msgs](#) : This message/service is used for op3_action_module.
- [op3_walking_module_msgs](#) : This message/service is used for op3_walking_module.

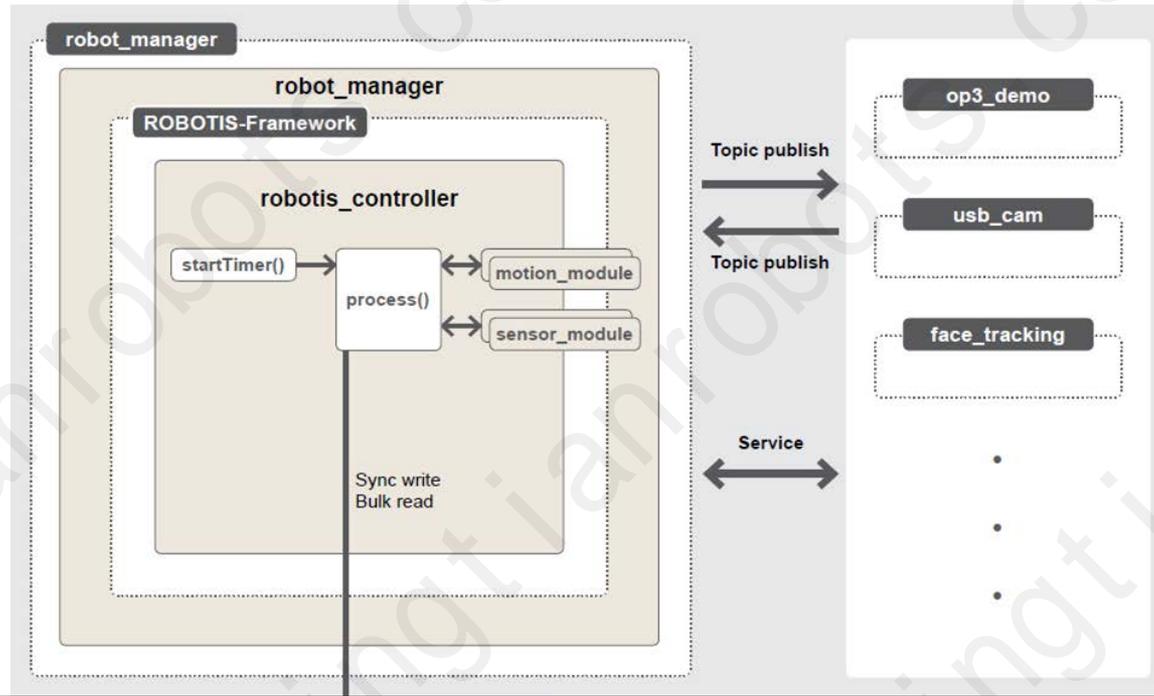

Tool msgs

- [op3_offset_tuner_msgs](#) : This message/service is used for OP3 offset tuning.

OP3 ROS Packages

[op3_manager](#)

`op3_manager` package applies ROBOTIS Framework to ROBOTIS OP3 using configuration files.

Function

OP3 ROS Packages

ROBOTIS-OP3/op3_manager

Robot File(op3_manager/config/OP3.robot)

```
[ control info ]
control_cycle = 8 # milliseconds

OP3 ROS Packages

ROBOTIS-OP3-Demo

- [ball_detector](#) : This package detects a specific colored ball from the image acquired from USB camera.
- [op3_demo](#) : Basic Demo for OP3(Soccer, Vision, Action)

OP3 ROS Packages

ROBOTIS-OP3-Common

robotis_op3_description

- doc : document for ROBOTIS OP3 joint & link information
- launch : launch file to execute Rviz
- stl : STL files of ROBOTIS OP3's each parts
- src : ROS node for Rviz to publish imaginary gripper joint
- urdf : urdf & xacro files for Thormang3 model

robotis_op3_gazebo

- config : ROS controller for gazebo
- launch : launch files to execute gazebo simulation
- worlds : simulation environments

OP3 ROS Packages

ROBOTIS-OP3-Tools

- [op3_action_editor](#): The software that can create and edit actions for ROBOTIS-OP3
- [op3_gui_demo](#): GUI software for ROBOTIS-OP3
- [op3_offset_tuner_server](#): `op3_offset_tuner_server` communicates with `op3_offset_tuner_client` to control OP3 for offset tuning, and manages tuned offset file.
- [op3_offset_tuner_client](#): `op3_offset_tuner_client` is a GUI program to communicate with `op3_offset_tuner_server` for offset tuning.
- [op3_walking_tuner](#): This package is used to tune OP3 walking motion

Install OP3 Packages

OP3 Dependent Packages from ROBOTIS

```
$ cd ~/catkin_ws/src/  
$ git clone https://github.com/ROBOTIS-GIT/DynamixelSDK.git  
$ git clone https://github.com/ROBOTIS-GIT/ROBOTIS-Framework.git  
$ git clone https://github.com/ROBOTIS-GIT/ROBOTIS-Framework-msgs.git  
$ git clone https://github.com/ROBOTIS-GIT/ROBOTIS-Math.git  
$ git clone https://github.com/ROBOTIS-GIT/ROBOTIS-OP3.git  
$ git clone https://github.com/ROBOTIS-GIT/ROBOTIS-OP3-Common.git  
$ git clone https://github.com/ROBOTIS-GIT/ROBOTIS-OP3-Demo.git  
$ git clone https://github.com/ROBOTIS-GIT/ROBOTIS-OP3-msgs.git  
$ git clone https://github.com/ROBOTIS-GIT/ROBOTIS-OP3-Tools.git  
$ git clone https://github.com/ROBOTIS-GIT/ROBOTIS-Utility.git
```

Install OP3 Packages

OP3 Additional Dependent Packages

```
$ git clone https://github.com/ROBOTIS-GIT/face_detection.git  
$ git clone https://github.com/clearpathrobotics/robot_upstart.git  
$ sudo apt install v4l-utils  
# apt-get install ros-kinetic-ros-control  
# apt-get install ros-kinetic-ros-controllers  
# apt-get install ros-kinetic-gazebo-ros-control
```

Build Dependent Packages

```
$ cd ~/catkin_ws && catkin_make
```

GUI Tool (Walking Tuner)

GUI Tool (Walking Tuner)

The screenshot displays the 'Walking Tuner' GUI interface, which is divided into several functional sections:

- Logging:** A text area on the left showing system messages such as "[INFO] [00:06]: [Demo] Set Mode : walking_module" and "[INFO] [00:07]: [Manager] Applied Mode".
- Basic Control:** The main control area on the right, featuring a 'Robot Init Pose' field at the top. Below it are tabs for 'Mode Control', 'Walking', 'Head Control', 'Motion', and 'Demo'.
 - Initial Pose:** A grid of input fields for X, Y, Z coordinates (e.g., -0.020 m, 0.015 m, 0.020 m) and Roll, Pitch, Yaw angles (all 0.0°), along with a Hip Pitch Offset of 7.0°.
 - Walking Parameter:** A grid of sliders and checkboxes for Period Time (750 ms), DSP Ratio (0.20), Step FB Ratio (0.28), Move Aim (On/Off), X Move Amplitude (0.000 m), Y Move Amplitude (0.000 m), Z Move Amplitude (0.030 m), and Yaw Move Amplitude (0.0°).
 - Balance Control:** A grid of sliders and checkboxes for Balance (On/Off), Hip Roll Gain (0.35), Knee Gain (0.25), Ankle Roll Gain (0.70), Ankle Pitch Gain (0.75), an 'Init Gyro' button, Y Swap Amplitude (0.025 m), Z Swap Amplitude (0.006 m), Arm Swing Gain (0.20), and Pelvis Offset (1.5°).
- Buttons:** 'Refresh', 'Save', and 'Apply' buttons are located at the bottom of the Basic Control section.
- Walking Command:** A horizontal timeline at the bottom with 'Start' and 'Stop' markers. A red dashed line with square endpoints labeled '1' and '2' spans the duration between these markers.

GUI Tool (Motion Play)

GUI Tool (Motion Play)

The screenshot displays the GUI Tool interface, divided into two main sections:

- Ros Communications:** A logging window showing the following messages:

```
[INFO] [83:13]: [Demo] Set Mode : action_module  
[INFO] [83:14]: [Manager] Applied Mode
```

A "Clear" button is located at the bottom right of this panel.
- Basic Control:** A control panel with a "Robot Init Pose" input field at the top. Below it are tabs for "Mode Control", "Walking", "Head Control", "Motion", and "Demo". The "Walking" tab is active. It contains a grid of buttons:

BREAK		STOP	
Walking Init	OK	No	Sit down
Stand up	Init pose	Get up(Front)	Get up(Back)
Right Kick	Left Kick	Ceremony	Action Demo

The "Walking Init" button is highlighted with a red dashed border.

GUI Tool (Control Head)

The screenshot displays the 'Basic Control' GUI. At the top, there is a 'Robot Init Pose' input field. Below it, the 'Mode Control' section has four tabs: 'Walking', 'Head Control', 'Motion', and 'Demo'. The 'Head Control' tab is selected and highlighted with a red box labeled '2'. Underneath the tabs, there are three buttons: 'none', 'head_control_module', and 'action_module'. The 'head_control_module' button is highlighted with a red dashed box and a red box labeled '1'. Below these buttons is a grid of 21 joint controls, each with a numerical ID and a dropdown menu. The controls are arranged in two columns:

[01] r_sho_pitch	none	[02] l_sho_pitch	none
[03] r_sho_roll	none	[04] l_sho_roll	none
[05] r_el	none	[06] l_el	none
[07] r_hip_yaw	none	[08] l_hip_yaw	none
[09] r_hip_roll	none	[10] l_hip_roll	none
[11] r_hip_pitch	none	[12] l_hip_pitch	none
[13] r_knee	none	[14] l_knee	none
[15] r_ank_pitch	none	[16] l_ank_pitch	none
[17] r_ank_roll	none	[18] l_ank_roll	none
[19] head_pan	none	[20] head_tilt	none
[200] opencr	none		

At the bottom of the joint controls is a 'Get Mode' button. On the left side of the GUI, there is a 'Logging' window with a 'Clear' button at the bottom.

GUI Tool (Control Head)

The screenshot displays a GUI for controlling a robot head. The interface is divided into several sections:

- Ros Communications:** Contains a 'Logging' window.
- Basic Control:** Features a 'Robot Init Pose' field and a 'Mode Control' section with tabs for 'Walking', 'Head Control', 'Motion', and 'Demo'.
- Head Control:** Includes sliders for 'Head Pan' and 'Head Tilt', both set to 0°. A 'Center' button is located below the sliders.

A red dashed box highlights the 'Head Control' section, with red boxes numbered 1, 2, and 3 indicating specific controls. Below the GUI, two 3D renderings of the robot head are shown, with a blue arrow pointing from the first (neutral) position to the second (tilted) position.
